D	HIGH Scenario: 2005 to 2036	65

I. EXECUTIVE SUMMARY

This report presents population projections for Manitoba during the period 2005 - 2036. Three series of population projections (labelled **LOW, MEDIUM** and **HIGH**) are presented, based on the 2004 preliminary population estimate and recent demographic information on births, deaths, and migration. The three scenarios assume:

(1) Manitoba's total fertility rate (TFR) will remain constant at 1.80 for the duration of the projection period in all three scenarios.

(2) For the MEDIUM scenario, net international migration increases to 9,358 by 2009, then decreases to 7,300 by 2014 where it stays for the remainder of the projection period.

Net international migration of 3,600 by 2008 for the LOW scenario.

For the HIGH scenario, a constant level of 11,900 net international migration is achieved by 2008.

(3) The MEDIUM scenario has net interprovincial migration moderating to -2,100 by 2007.

Net interprovincial migration of -4,000 by the year 2008 for the LOW scenario.

The HIGH scenario net interprovincial migration becomes a constant -500 by 2008.

(4) The life expectancy at birth increasing for females and males by 1.3 and 2.6 years respectively.

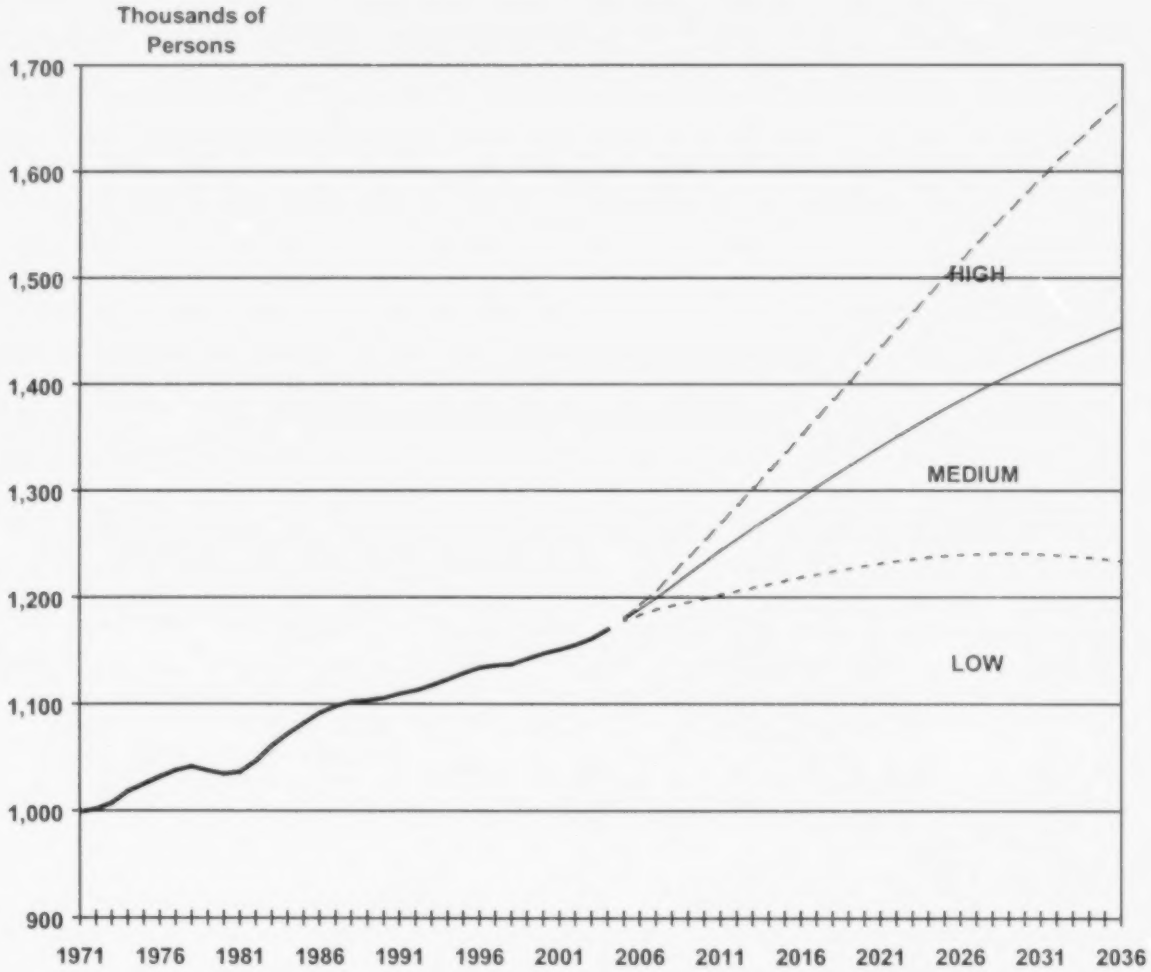
A summary of the projections is:

	MANITOBA POPULATION			MEDIAN AGE (YEARS)		
Year (July 1)	Medium	Low	High	Medium	Low	High
2001	1,151.3	1,151.3	1,151.3	36.4	36.4	36.4
2004	1,170.3	1,170.3	1,170.3	37.0	37.0	37.0
2005	1,179.7	1,177.8	1,180.9	37.1	37.1	37.0
2006	1,189.4	1,184.0	1,193.1	37.2	37.2	37.1
2011	1,244.3	1,202.5	1,270.4	37.6	38.1	37.2
2016	1,294.3	1,218.6	1,352.6	38.1	38.9	37.5
2021	1,341.8	1,231.9	1,436.1	38.7	39.8	38.0
2026	1,385.3	1,239.7	1,517.8	39.6	40.8	38.7
2031	1,422.6	1,240.2	1,595.4	40.4	41.8	39.4
2036	1,454.4	1,234.0	1,669.0	41.1	42.7	40.0

Under the MEDIUM projection scenario, Manitoba's population of 1,170,300 in 2004 will increase to 1,454,400 by July 1, 2036. This represents an average annual increase of 0.7% or 9,900 persons. Between 2004 and 2017, the population is projected to grow quite quickly, adding 133,700 persons in 13 years for average annual growth of 0.8% or 10,300 persons per year. From 2017 to 2036, the population is still projected to grow but at a somewhat slower pace, from 1,304,000 in 2017 to 1,454,400 in 2036 for an average increase of 0.6% or 7,900 persons per year.

The LOW scenario is projected to have an average annual increase of 0.2% or 2,000 persons per year and the HIGH scenario is projected to have an average increase of 1.1% or 15,600 persons per year.

MANITOBA POPULATION AS OF JULY 1st
1971 - 2004 ESTIMATED AND 2005 - 2036 PROJECTED



II. INTRODUCTION

This set of population projections for the Province of Manitoba has been developed in consultation with the Demographic Statistics Committee. This committee, chaired by the Manitoba Bureau of Statistics, is composed of representatives from six other departments and agencies of the Manitoba government:

i) Education and Training
ii) Family Services and Housing
iii) Health
iv) Industry, Economic Development and Mines
v) Labour and Immigration
vi) Manitoba Hydro

The Demographic Statistics Committee reviewed draft projections and adopted LOW, MEDIUM and HIGH scenarios.

For the purpose of these projections, it should be noted that the MEDIUM scenario is considered the most likely set of conditions. The HIGH and LOW series provide a range of future growth for Manitoba.

The projections in this report are based on the 2004 preliminary population estimate for Manitoba of 1,170,300, adjusted for an estimate of census undercoverage, non-permanent residents and Returning Canadians and are meant to replace the Manitoba level population projections produced in December, 1999.

Projections are not forecasts but are based on what would occur if the stated assumptions hold true. As the process of change is cumulative, the reliability of the projection may decrease over time. The Manitoba Bureau of Statistics will review the projections annually and revise when necessary.

Appendices B, C and D of this report provide the MEDIUM, LOW and HIGH scenarios in both graphical and tabular form for 2005 to 2036. Appendix A provides Manitoba's demographic change by population component for 1971 to 2004.

The Manitoba Bureau of Statistics has also developed a set of regional population projections that are compatible with the Manitoba level MEDIUM projections. These regional projections incorporate recent demographic information for the eight Economic Regions.

To obtain further information on this report, please contact Jacqueline Storen at (204) 945-2396.

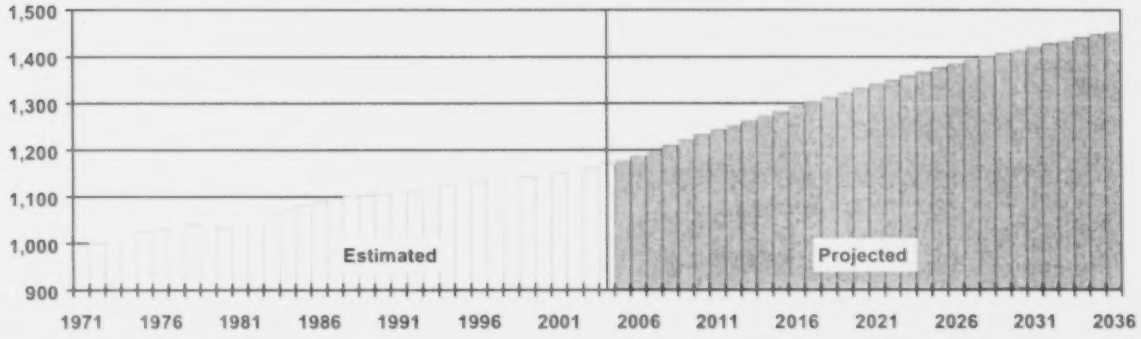
DECEMBER 2004

III. MANITOBA PROJECTED POPULATION 2005-2036: MEDIUM SCENARIO

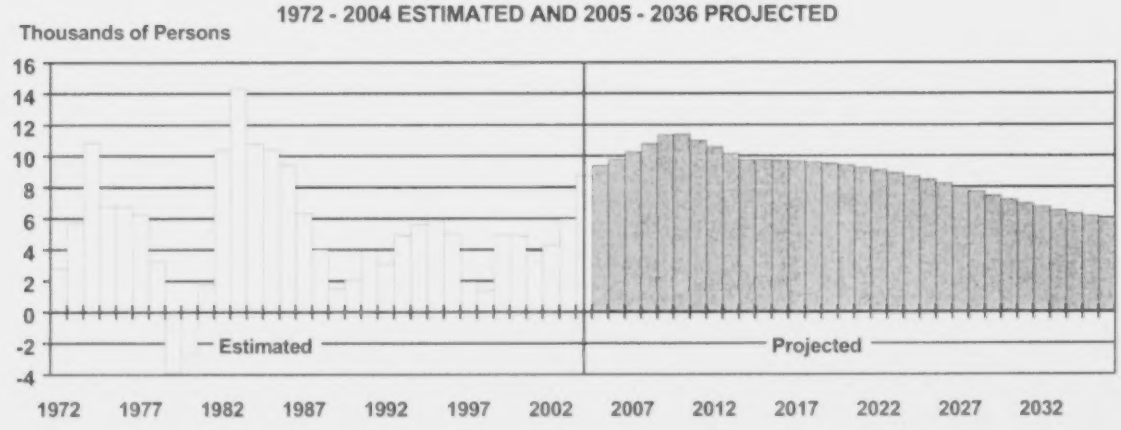
Table 1 illustrates the projected population and components of population growth under the MEDIUM scenario for Manitoba. Chart 1 illustrates the estimated and projected population levels for 1971 to 2036.

CHART 1. MANITOBA POPULATION AS OF JULY 1st
MEDIUM SCENARIO
1971 - 2004 ESTIMATED AND 2005 - 2036 PROJECTED



Manitoba's population of 1,170,300 as of July 1, 2004 is projected to increase throughout the projection period to a figure of 1,454,400 by July 1, 2036 (an average annual increase of 0.7% or 8,900 persons). Between 2004 and 2017, the population is projected to grow quite quickly, adding 133,700 persons in 13 years for average annual growth of 0.8% or 10,300 persons per year. From 2017 to 2036, the population is still projected to grow but at a somewhat slower pace, from 1,304,000 in 2017 to 1,454,400 in 2036 for an average increase of 0.6% or 7,900 persons per year. Chart 2 shows the estimated and projected annual level change of the population.

CHART 2: MANITOBA POPULATION AS OF JULY 1st
ANNUAL LEVEL CHANGE: MEDIUM SCENARIO
1972 - 2004 ESTIMATED AND 2005 - 2036 PROJECTED



A constant total fertility rate of 1.80 for Manitoba, coupled with a steady increase in the number of females of child bearing age to 2020 will result in a projected increase in the number of births from 13,700 in 2001 to 16,100 by 2019. After which, the number of births per year will decrease slightly to 15,600 by 2030 before rising again to 15,900 at the end of the projection period.

The projected increase in life expectancy at birth for females and males will not entirely moderate the ageing of the population. The projected number of deaths will steadily increase from 9,700 to 15,250 by the year 2036. The natural increase of the population (births minus deaths) will follow a pattern similar to the births. It will increase from 4,000 in 2001 to 4,500 by 2012 and then decrease to a value of 700 for the last year of the projection period.

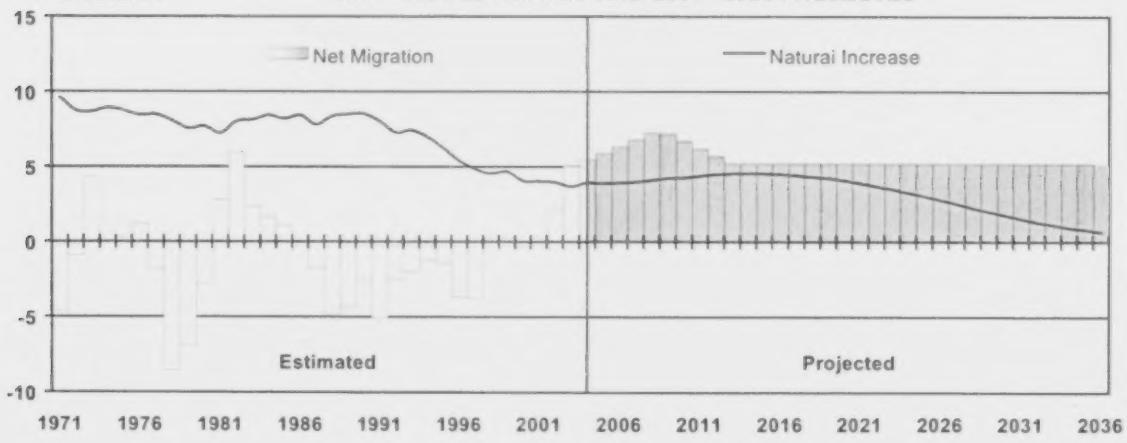
Net international migration is projected to increase substantially to a level of 8,500 by the year 2008, then decrease to 6,400 by 2013 and remain at that level for the remainder of the projection period. This increase in net international migration is mainly due to the anticipated growth of international immigrants.

Net interprovincial migration is estimated to be -4,300 for 2001, -2,900 for 2002 and -2,100 for 2004. Due to the aging of the population (with lower propensity to migrate), net interprovincial migration is projected to remain at -2,100 from 2004 onward.

Total net migration will increase from 5,500 in 2004 to 7,300 in 2008, after which it will decline to 5,200 by 2013 and remain at this level to the end of the projection period.

Annual population gains for Manitoba will vary from 5,900 in 2036/37 to 11,400 in 2009/10 throughout the projection period. As the population ages and the fertility rate remains at 1.80, the major factor driving population growth will be migration. It is projected that migration will account for 62.3% of total population growth during the projection period. This is a marked departure from years past (see chart 3) and reflects changes in international and interprovincial migration as well as the age structure of the population.

CHART 3. COMPONENTS OF MANITOBA POPULATION CHANGE
MEDIUM SCENARIO
1971 - 2003 ESTIMATED AND 2004 - 2036 PROJECTED



The projected increase of the population is not uniform across all age groups. The number of people in the older age groups, fifty-five and over, is projected to grow much larger relative to the younger age groups. For example, between 2004 and 2017, the number of fifty-five to sixty-four year olds will grow by 43.6% and the number sixty-five to seventy-four year-olds will grow by 46.7%. However the number of children aged zero to fourteen will only increase by 1.9% between 2004 and 2017. Over the longer term, 2004 to 2036, it is projected that the number of seniors (65 years and over) will increase significantly. The number of sixty-five to 74 year-olds increasing by 83.5%, seventy-five to eighty-four year olds growing by 83.1% and those over eighty-five years old increasing by 91.6%. This compares to a 6.7% increase in the number of zero to fourteen year-olds.

As a result, the age distribution will change during the projection period with a decreased percentage of children and an increased percentage of seniors. The percentage of children (aged 0 - 14 years) is projected to decrease from 20.0% in 2004 to 17.1% in 2036 as the percentage of seniors (aged 65 and over) is projected to increase from 13.5% to 20.1%. While the number of children will increase from 234,000 in 2004 to 249,000 in 2036, the number of seniors will nearly double from 158,000 in 2004 to 292,000 in 2036. The number of very old (90 years and over) is also projected to nearly double in size, growing from 8,200 in 2004 to nearly 15,800 by 2036, for an increase of 92.6% or an average annual increase of 2.3%.

The percentage of adults (aged 15 - 64) will decrease slightly, go from 66.5% in 2004 to 62.8% by 2036. Within the adult population, the age distribution will change over the course of the projection period. For the first fifteen years (2001 to 2015), the age categories spanning the years 40 to 54 will have the largest populations. However, after 2015, the age categories 30 to 44 will have the largest populations.

Chart four below shows the change in population by age group relative to 2004. Charts five and six on the following page show the population and the total share of the population by age group.

CHART 4. PROJECTED POPULATION INDEX BY AGE GROUP
MANITOBA: MEDIUM SCENARIO

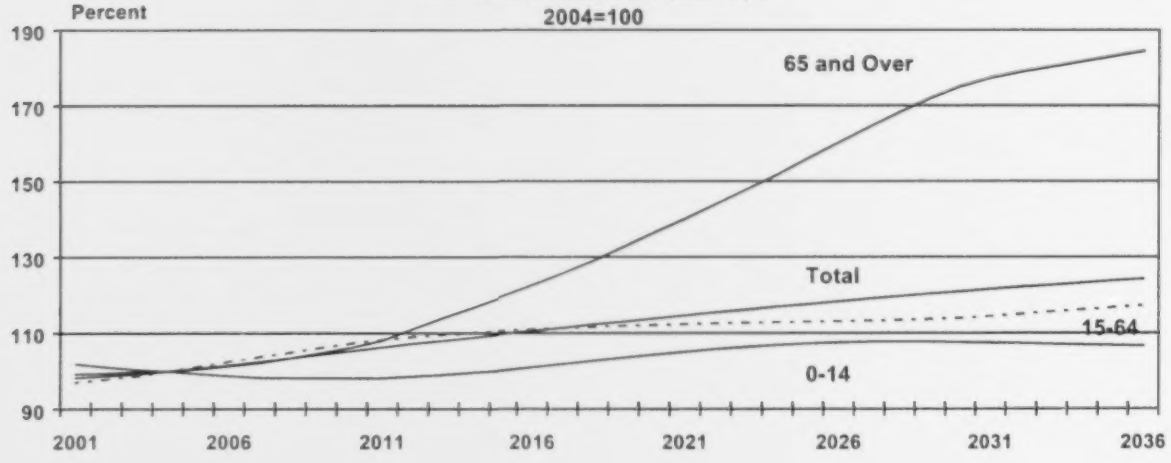


CHART 5. POPULATION AS OF JULY 1st BY AGE GROUP
MANITOBA: MEDIUM SCENARIO
1971 TO 2001 ESTIMATED AND 2004 TO 2036 PROJECTED

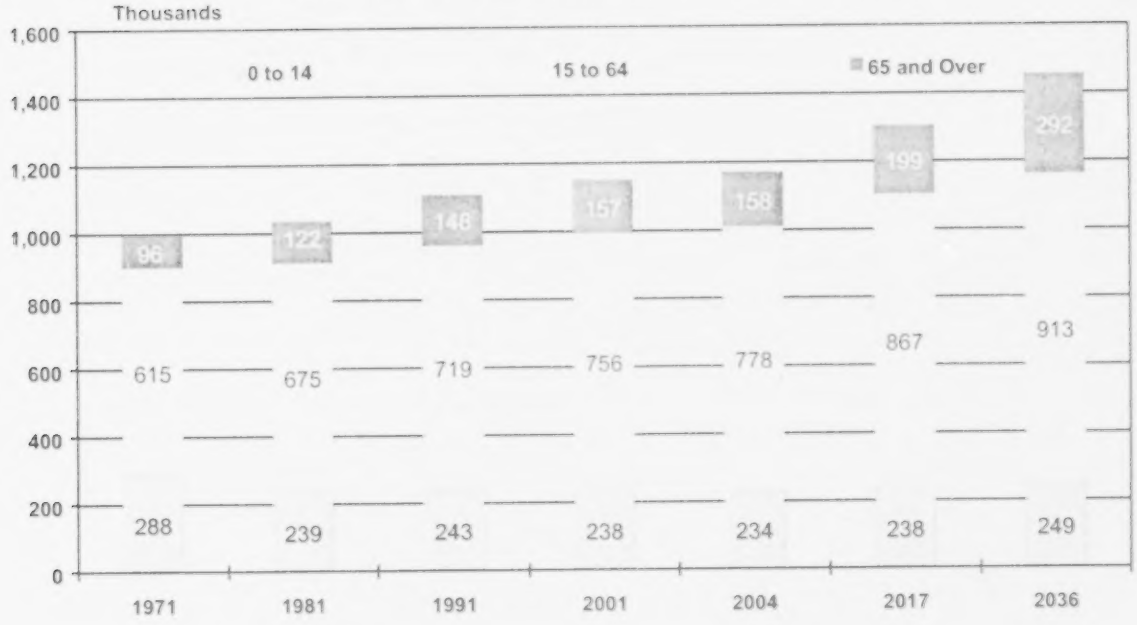

CHART 6. POPULATION AS OF JULY 1st BY AGE GROUP: SHARE OF TOTAL
MANITOBA: MEDIUM SCENARIO
1971 TO 2001 ESTIMATED AND 2004 TO 2036 PROJECTED

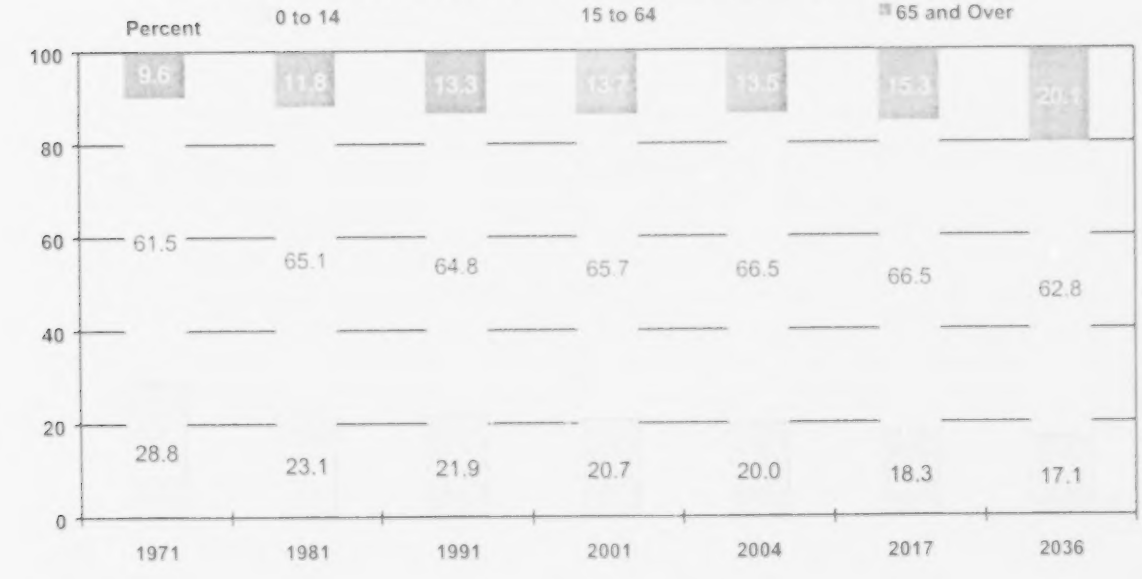

CHART 5. POPULATION AS OF JULY 1st BY AGE GROUP
MANITOBA: MEDIUM SCENARIO
1971 TO 2001 ESTIMATED AND 2004 TO 2036 PROJECTED

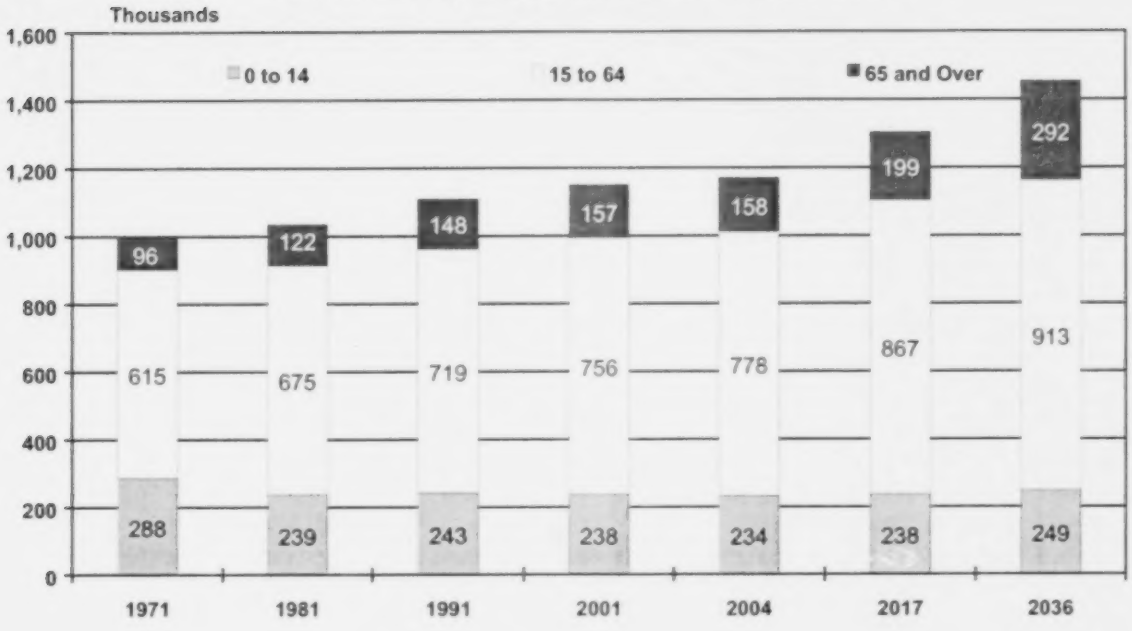

CHART 6. POPULATION AS OF JULY 1st BY AGE GROUP: SHARE OF TOTAL
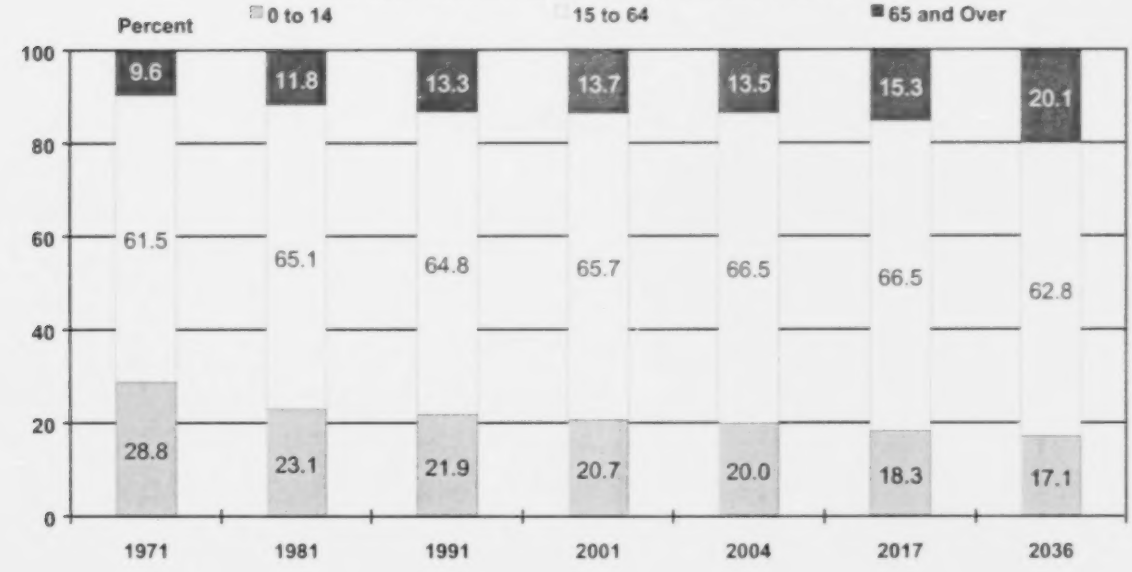
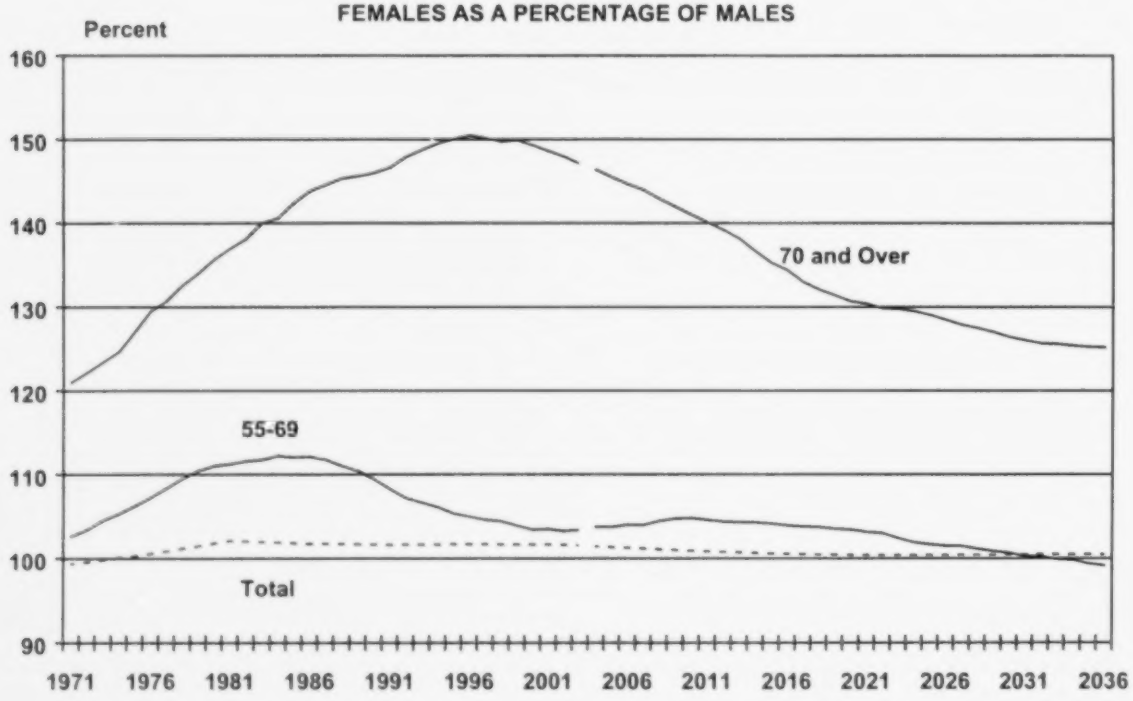
MANITOBA: MEDIUM SCENARIO
1971 TO 2001 ESTIMATED AND 2004 TO 2036 PROJECTED



An increase in the median age of the population is projected, from 37.0 years in 2004 to 41.1 years by 2036, for an increase of 4.1 years. The median age for females is projected to increase 3.8 years, from 38.2 in 2004 to 42.0 in 2036. The male median age is also projected to escalate from 35.8 in 2004 to 40.3 in 2036, for an increase of 4.5 years.

The number of females in the population is projected to increase from 580,417 in 2001 (50.42% of the total population) to 729,107 by 2036 (50.13%). Their total share of the population is projected to decrease, particularly in the older age groups. In 2004, women comprise 59.4% of the total population that is 70 years and older. In 2036, it is projected that women will comprise 55.6% of this age group. With respect to the age group 55-69, females account for nearly 51.0% of the population in 2004, by 2033 it is projected that the proportion of males will surpass females in this age group (see chart 7 below). The increasing share of males in older population groups is a reflection of the assumption that the life expectancy for men will increase more rapidly than for women.

CHART 7. PROJECTED POPULATION BY AGE GROUP
MANITOBA: MEDIUM SCENARIO
FEMALES AS A PERCENTAGE OF MALES



The changing age structure of the population can also be seen in the Manitoba individual age pyramid. Between 2004 and 2036, the largest increase will occur in the older age categories (see chart 8).

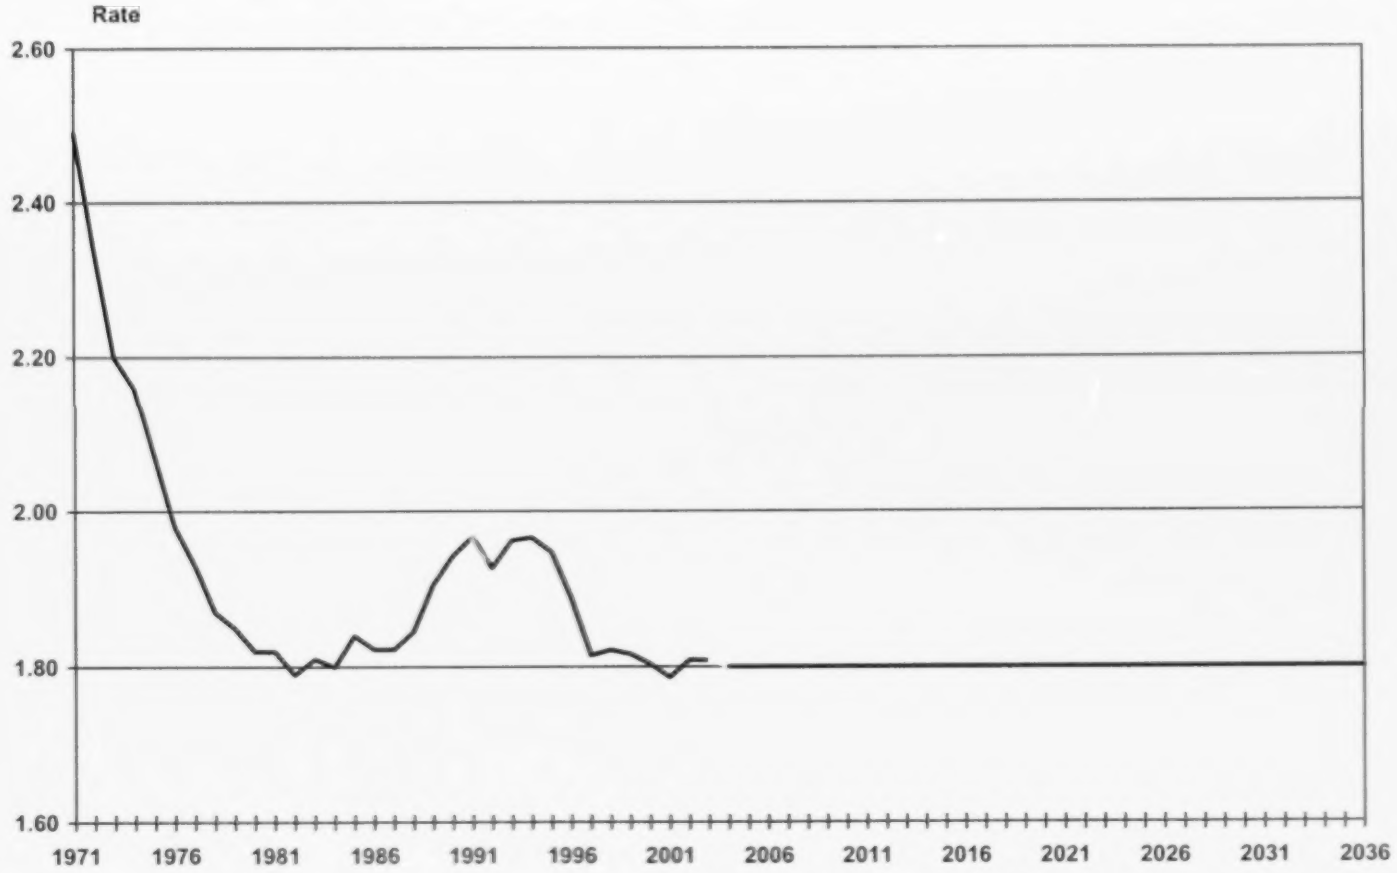
IV. PROJECTED POPULATION COMPONENTS

CHART 9. MANITOBA TOTAL FERTILITY RATES
1971 - 2003 ESTIMATED AND 2004 - 2036 PROJECTED



MANITOBA BUREAU OF STATISTICS

DECEMBER 2004

V. IV. PROJECTED POPULATION COMPONENTS

This section provides historical and projected data on the four population components:

fertility
international migration
interprovincial migration
mortality

i) FERTILITY

The fertility assumption is expressed as the total fertility rate[1], the expected number of births per woman during the period 15 - 49 years of age.

Table 2 shows the estimated and projected total fertility rates (TFR) for Manitoba on a quinquennial basis from 1971 to 2036.

The total fertility rate holds steady at 1.8 in all three scenarios for the entire 35-year period. Since Manitoba's current fertility rate of 1.8 is notably higher than the national average of 1.5 and has been more or less at this level for the past few years, it is assumed that Manitoba's rate will remain constant over the projection period.

TABLE 2: MANITOBA TOTAL FERTILITY RATE

ACTUAL				PROJECTED	
				HIGH	1.80
1986	1991	1996	2001	MEDIUM	1.80
1.82	1.97	1.89	1.80	LOW	1.80

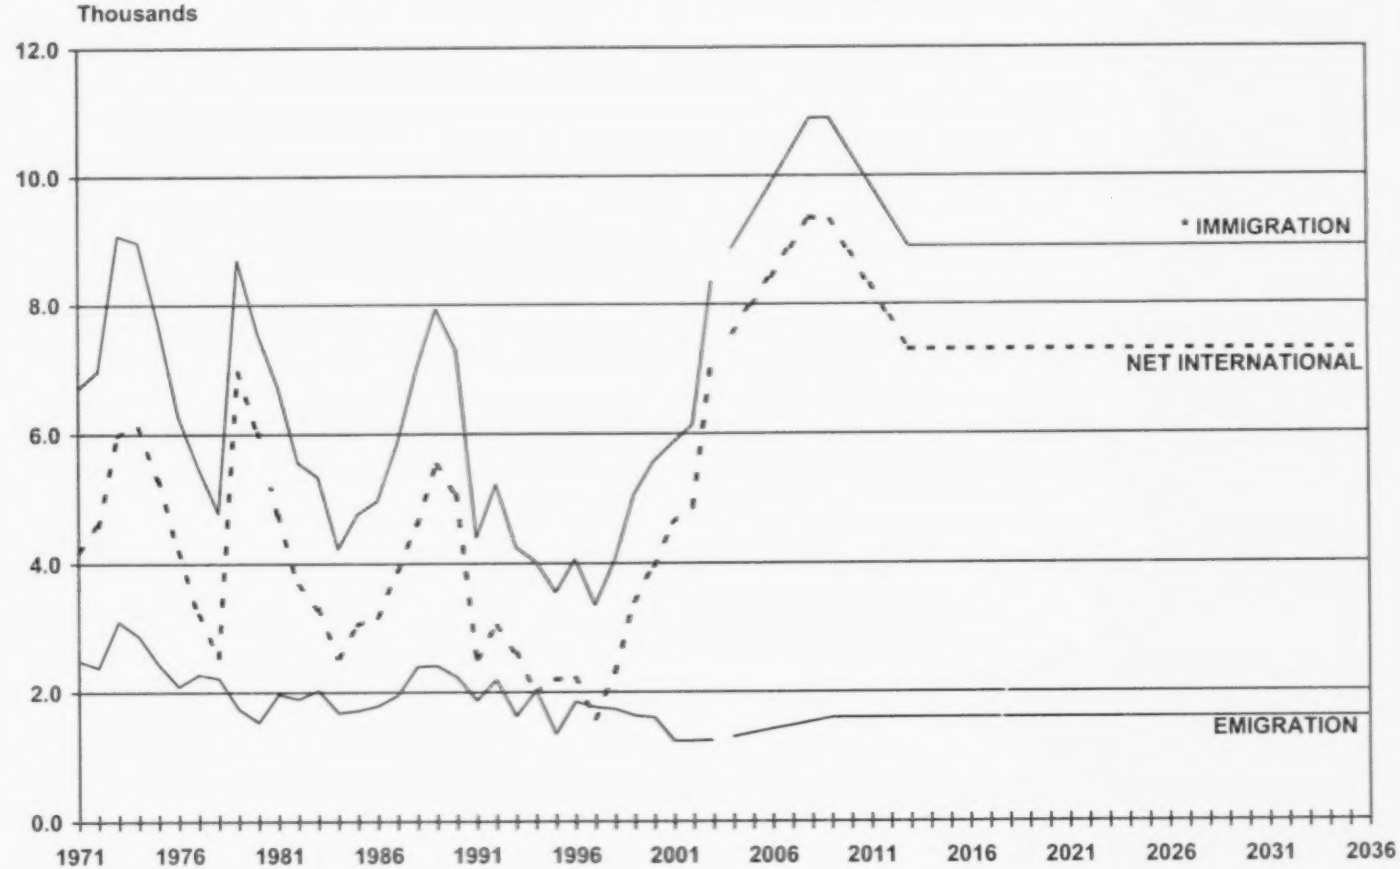
The number of births in Manitoba is projected to gradually increase throughout the first eighteen years of the projection period, decline slightly for thirteen years and then increase for the remaining years.

A constant total fertility rate of 1.80 for Manitoba coupled with a steady increase in the number of females of child bearing age to 2020 will result in a projected increase in the number of births from 13,700 in 2001 to 16,100 by 2019. Then, the ageing of the female population will result in a gradual decline to 15,600 births by 2030. Only to be followed by a small rise to 15,900 by 2036 as the number of females in their 20's (the peak child-bearing years) increases.

---

[1]The **total fertility rate** is defined as the sum of the female age-specific fertility rates multiplied by 5 where the age-specific fertility rate is the birth rate per woman in the respective 5 year age period from 15 - 49 years of age.

CHART 10. INTERNATIONAL MIGRATION
MANITOBA: MEDIUM SCENARIO
1971 - 2004 ESTIMATED AND 2005 - 2036 PROJECTED



MANITOBA BUREAU OF STATISTICS

* Includes Returning Emigrants and Net Non-Permanent Residents less those persons Temporarily Abroad.

DECEMBER 2004

ii) INTERNATIONAL MIGRATION

Table 3 shows the international migration components for Manitoba during the period 1993/94 to 2003/04. The projected components to 2036 are shown Tables 4, 5 and 6. This information is also presented in Chart 10 for the MEDIUM scenario.

The immigration component is considerably more volatile than the emigration component. For example, since 1999 the number of international immigrants on an annual basis has grown considerably. Through the Canada Manitoba Immigration Agreement (CMIA), Manitoba has secured a greater role in increasing the provincial immigration intake as reflected in the Manitoba Provincial Nominee Program. The program has grown from 1,357 in 2001/02 to 3,655 persons in 2003/04.

For the purpose of these projections, three components of international immigration were considered; Provincial Nominees, other international immigrants not part of the Provincial Nominee Program and the "other" category which is composed of non-permanent residents and returning Canadians less those that are temporarily abroad.

Immigration in the MEDIUM scenario is projected to increase significantly over the next five years from 8,374 in 2003/04 to 10,900 in 2008/09, after which it is projected to decline to 8,900 by 2013/14. It is then to remain at that level for the duration of the projection period. The sharp increase at the beginning of the projection period reflects the anticipated growth of Provincial Nominees in the near future.

For the LOW scenario, the immigration level is projected to decrease over the next four years from 8,374 in 2003/04 to a level of 5,400 by 2007/08. It is then projected to remain at that level for the duration of the projection period.

Immigration in the HIGH scenario changes much more than in the MEDIUM situation, from 8,374 in 2003/04 to 13,500 by 2007/08, after which it remains constant. This assumption reflects a large increase in not only Provincial Nominees but immigrants not part of the Provincial Nominee Program and those falling into the "other" category.

In the LOW scenario, the emigration level is projected to increase from 1,252 in 2003/04 to a level of 1,800 by the year 2007/08, and then remain constant. In the MEDIUM and HIGH scenarios, emigration is expected to remain relatively stable at 1,600 for the projection period.

TABLE 3: INTERNATIONAL MIGRATION COMPONENTS: MANITOBA

	Provincial Nominees	Non-Provincial Nominees	Immigration	Other*	Emigration	Net Migration
	(1)	(2)	(1)+(2)			
1993/94	-	4,525	4,525	-276	1,631	2,618
1994/95	-	3,811	3,811	212	2,029	1,994
1995/96	-	3,666	3,666	-112	1,352	2,202
1996/97	-	4,030	4,030	38	1,853	2,215
1997/98	-	3,093	3,093	261	1,765	1,589
1998/99	-	3,293	3,293	756	1,731	2,318
1999/00	-	4,207	4,207	849	1,633	3,423
2000/01	-	4,834	4,834	733	1,604	3,963
2001/02	1,357	3,468	4,825	1,033	1,241	4,617
2002/03	2,026	2,883	4,909	1,224	1,247	4,886
2003/04	3,655	3,757	7,412	962	1,252	7,122
Average	2,346	3,779	4,419	516	1,576	3,359

The average value for net international migration during the ten-year period 1994 to 2004 is estimated at 3,359. The projected net figures of 3,600, 7,300 and 11,900 are either close to the ten-year average or notably higher. This implies a slightly lower net international migration figure for the LOW scenario and higher net figures for the MEDIUM and HIGH scenarios.

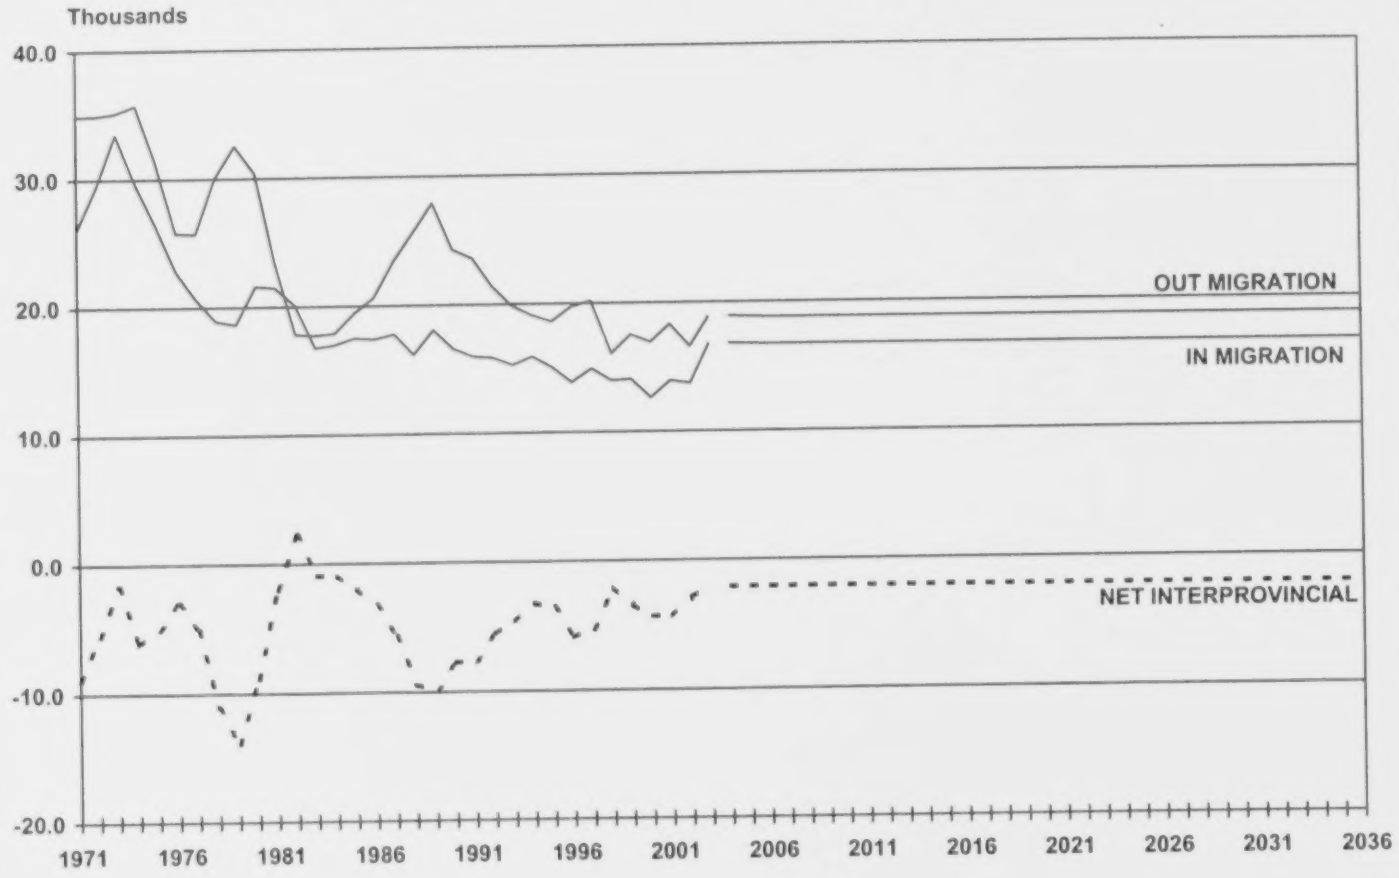
CHART 11. INTERPROVINCIAL MIGRATION
MANITOBA: MEDIUM SCENARIO
1971 - 2004 ESTIMATED AND 2005 - 2036 PROJECTED



MANITOBA BUREAU OF STATISTICS

DECEMBER 2004

iii) INTERPROVINCIAL MIGRATION

Interprovincial migration is a volatile component of population growth and can have significant impact on the year-to-year change in Manitoba's population.

Table 7 presents the interprovincial migration components from 1992/93 to 2003/04. During the period from 1971/72 to 2003/04, net interprovincial migration has ranged from -13,884 in 1979 to 2,292 in 1982 with the average for the last 33 years being -4,947. However for the last twelve years the average annual net loss has been -3,942 persons and for the last two years it has averaged -2,485 persons.

TABLE 7: MANITOBA INTERPROVINCIAL MIGRATION COMPONENTS

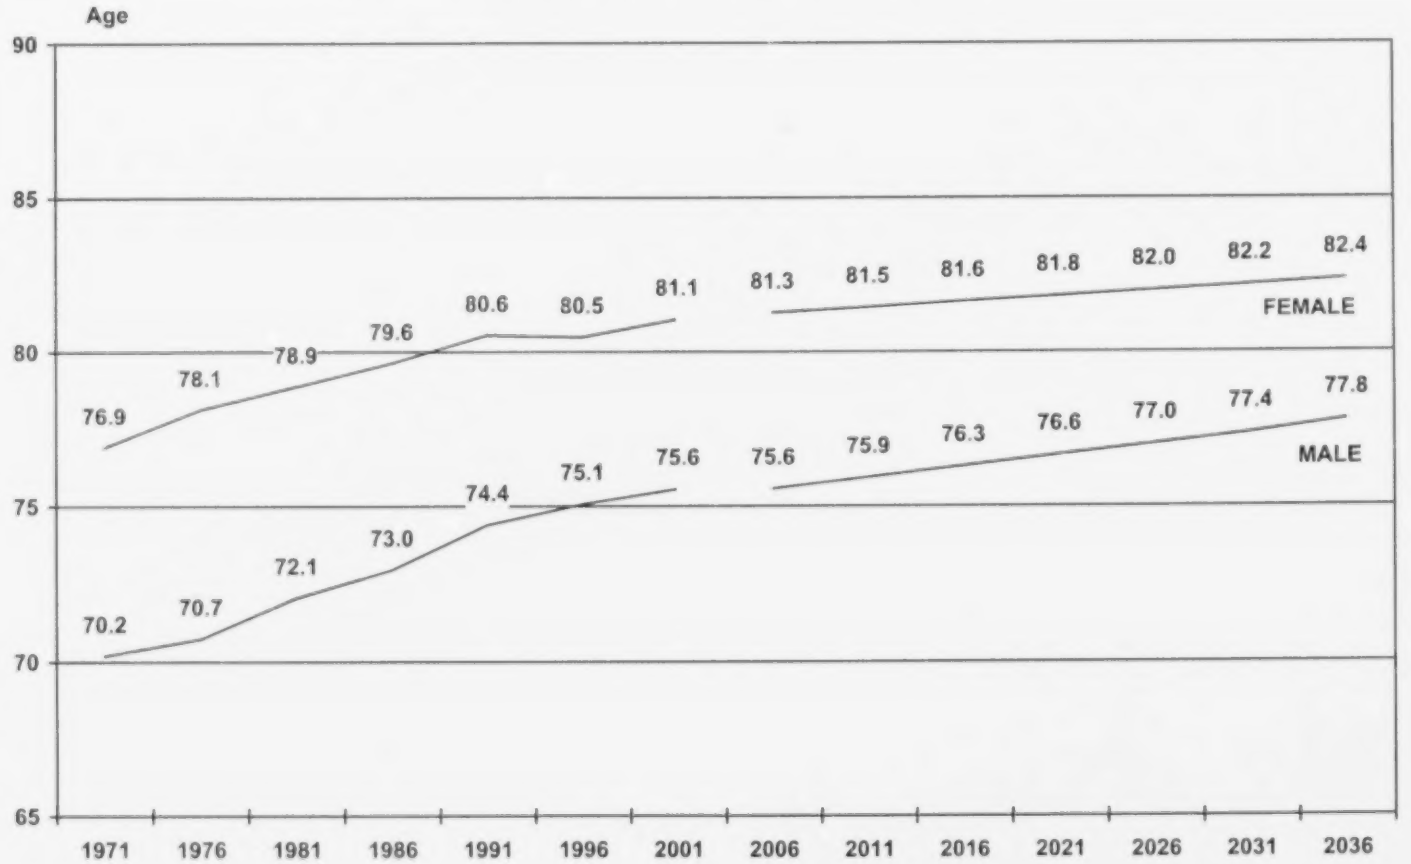
	In	Out	Net
1992/93	15,848	21,392	-5,544
1993/94	15,253	19,867	-4,614
1994/95	15,890	19,110	-3,220
1995/96	15,075	18,641	-3,566
1996/97	13,883	19,756	-5,873
1997/98	14,906	20,182	-5,276
1998/99	13,985	16,098	-2,113
1999/00	14,075	17,531	-3,456
2000/01	12,623	16,946	-4,323
2001/02	13,960	18,304	-4,344
2002/03	13,707	16,582	-2,875
2003/04	16,865	18,960	-2,095
Average	14,673	18,614	-3,942

Assumptions for annual net interprovincial migration were -4,000 persons for the LOW scenario, -2,100 persons for the MEDIUM scenario and -500 persons for the HIGH scenario (see Table 8). The LOW scenario is very close to the average value for the past 11 years, while the MEDIUM and HIGH scenarios produce lower projected interprovincial migration losses for Manitoba.

TABLE 8: PROJECTED INTERPROVINCIAL MIGRATION

	LOW SCENARIO			MEDIUM SCENARIO			HIGH SCENARIO		
	In	Out	Net	In	Out	Net	In	Out	Net
2004/05	16,399	18,970	-2,571	16,810	18,907	-2,097	16,649	18,345	-1,696
2005/06	15,933	18,980	-3,047	16,755	18,853	-2,098	16,433	17,730	-1,297
2006/07	15,466	18,990	-3,524	16,700	18,800	-2,100	16,216	17,115	-899
2007/08	15,000	19,000	-4,000	16,700	18,800	-2,100	16,000	16,500	-500
2036/37	15,000	19,000	-4,000	16,700	18,800	-2,100	16,000	16,500	-500

CHART 12. LIFE EXPECTANCY AT BIRTH
MANITOBA
1971 - 2001 ESTIMATED AND 2006 - 2036 PROJECTED



MANITOBA BUREAU OF STATISTICS

DECEMBER 2004

iv) MORTALITY

The assumption for mortality is expressed as the life expectancy at birth, which is calculated from life survival tables for Manitoba. Table 9 and Chart 12 show the Manitoba life expectancy at birth for females and males on a quinquennial basis.

It is projected that the life expectancy for Manitoba females will increase 1.3 years during the projection period, from a figure of 81.1 years in 2001 to 82.4 years by 2026. For the same time period, the life expectancy for males is projected to increase by 2.6 years from 75.2 to 77.8 years by 2026.

These assumptions are made for all three population projection scenarios.

TABLE 9: LIFE EXPECTANCY AT BIRTH: MANITOBA

	ACTUAL							PROJECTED	
	1971	1976	1981	1986	1991	1996	2001	2016	2036
Females	76.9	77.9	78.7	80.0	80.7	80.7	81.1	81.6	82.4
Males	70.2	70.7	72.1	73.4	74.6	75.4	75.2	76.3	77.8
Female-Male Difference	6.7	7.2	6.6	6.6	6.1	5.5	5.9	5.3	5.6

The effect of the aging population on the number of deaths will be moderated by the projected increase in the life expectancy at birth but will still result in an increased annual number of deaths. The number of deaths is projected to increase by 51.5% in the MEDIUM scenario, from the 2004 value of 10,100 to 15,300 over the next 35 years.
